***Response to Arguments***

1. Applicant's arguments, see Remarks, filed 06/02/09, with respect to claims 1 and 7-17 have been fully considered and are persuasive. The rejections of claims 1 and 7-17 has been withdrawn.

In particular, the rejection of claims 1 and 7-17 under U.S.C. 112, first paragraph has been withdrawn, since it is clear that the control unit is able to generate the control signal SCL and to read information stored in the shape memory.

Further, the rejections of claims 1, 7, 13 and 17 under 35 U.S.C 103(a) as being unpatentable over Osada in view of Tsukamura, and over Osada in view of Tsukamura and Smith have been withdrawn. Specifically, after reviewing Tsukamura reference, it is noted that Tsukamura teaches using a push-pull or error signal LE to generate a difference signal. Such signal is not the same as the claimed actuator deviation signal because the push-pull or error signal LE is a signal that depends from the position of the lens actuator with respect to an optical disk (see Figs. 4-6; LE signal is obtained as result of the signal detected from the optical disk). Essentially, the difference signal generated by element 16 in Fig. 4 does not represent the claimed actuator deviation signal. Accordingly, claims 1, 7, 13 and 17 are patentable over Osada in view of Tsukamura.

***Allowable Subject Matter***

2. In regards to claim 1, none of the reference of record alone or in combination discloses or suggests a disc drive apparatus for optical discs, comprising:

a frame;

a sledge displaceably mounted with respect to said frame;

Art Unit: 2627

a lens actuator displaceably mounted with respect to said sledge;

a control unit for generating a control signal (SCL) received by the lens actuator;

**wherein the control unit is designed, during a jump operation, to continuously generate said control signal (SCL) for the lens actuator at least partly on the basis of an actuator deviation signal (SAS) representing a difference between actuator position (XA) and sledge position (XS) irrespective of a position of the lens actuator with respect to an optical disk.**

Accordingly, claims 1 and 7-17 are allowed.

***Conclusion***

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to LIXI CHOW whose telephone number is (571)272-7571. The examiner can normally be reached on Mon-Fri, 8:30am to 6:00pm.
